DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a sample support plate, classified in class 422, subclass 69.
- II. Claims 10-12, drawn to a method for manufacturing a sample support plate, classified in class 427, subclass 447.
- III. Claims 13-18, drawn to a method for loading purified biomolecules, classified in class 436, subclass 56.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by coating the plate with hydrophilic and hydrophobic layers without using a resolvable printing dye.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be used the same way as e.g. MediSorpTM Surface plates or MultiSorpTM Surface plates.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different functions and different effects: while the method of invention II comprises coating of the plate with hydrophilic, lipophobic and affinity adsorption layers, the method of invention III comprises exposing a support plate with affinity absorption area and hydrophilic and hydrophobic area to biomolecular analytes, washing the

plate, desorbing the adsorbed molecules and drying eluent solution, which are completely different method steps than those of Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Philip L. Conrad on 09/19/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
